

“ There are hidden compromises built into fuel and oil additives. But, what would happen if a development team were tasked with creating products that must only use the very best technologies and components regardless of cost? **Well, now we have.**”

Oilsyn®

Diesel Power DNA Ultimate Super Diesel Conversion

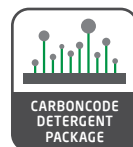

Highest Quality Cetane, Cleaning and Combustion.
Compatible with Diesel Pump Düse (PD) and Common Rail (CR) Engines.

Diesel Power DNA converts regular diesel into a premium Super diesel fuel by maximising available engine power from a combination of cetane increase, CarbonCode fuel cleaner, proprietary ester lubricant and combustion catalyst.

2-Ethylhexyl Nitrate (2-EHN) is the worldwide standard for raising the cetane number in diesel fuels and is what differentiates regular from Super diesel fuel. At Oilsyn, we only use the finest purity 2-EHN in our diesel formulations, raising the cetane number by up to 5 points. A drying function also helps remove any water contamination.

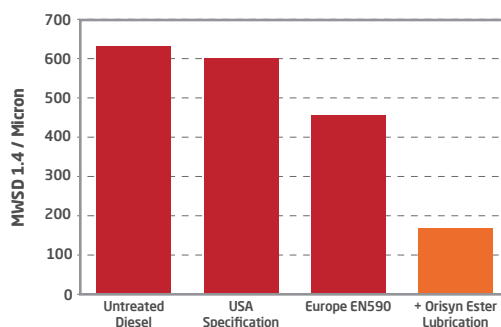

Oilsyn's CarbonCode detergent pack ensures existing fuel system deposits are removed, and the system remains clean for maximum continual performance and fuel efficiency.

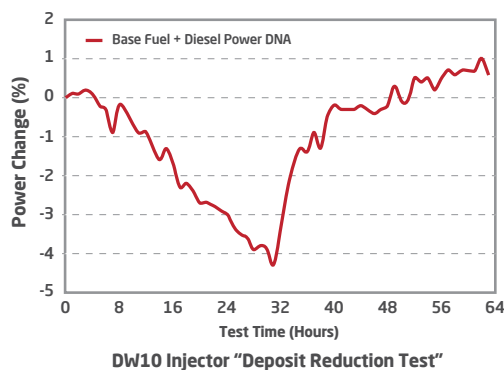

Oilsyn's Orisyn proprietary ester-based lubricant outperforms conventional diesel fuels lubricants or 2-stroke oil used as a diesel additive, with an HFRR well below 200, which is an industry first. The engine and fuel system are notably quieter.

Diesel Power DNA provides continuous DPF and Turbo Cleaning

Orisyn Ester Lubrication Technology

Engine Clean-Up Test

Oilsyn®

Diesel Power DNA Ultimate Super Diesel Conversion

Oilsyn's Fueloxy combustion catalyst helps maximise combustion efficiency, ensuring all of the fuel is converted to usable energy during the combustion process resulting in improved engine torque, lower exhaust emissions, and a cleaner DPF.

Diesel Power DNA is suitable for all older and modern diesel engines running pump diesel fuel.

"This is ridiculous!

The acceleration is insane yet it feels so crisp and smooth."

"If you imagine

the difference between supermarket and super diesel. This is the same difference again on top."

"By far the best I have tried..."

I don't know what lube that is but under hard acceleration the engine now sounds sewing machine smooth and is soooooo responsive" Graham K

FUNCTIONS

RAISES
CETANE NUMBER

LUBRICATES
AND PROTECTS

CLEANS FUEL
SYSTEM AND ENGINE

IMPROVES
COMBUSTION QUALITY

BENEFITS

SMOOTHER
RUNNING
ENGINE

MAXIMISES ENGINE
PERFORMANCE AND
FUEL ECONOMY

REDUCES
HARMFUL EXHAUST
EMISSIONS

LOWER
MAINTENANCE
COSTS

Directions

Remove seal, pour required amount into fuel tank and then add fuel.
Use 1 part Diesel Power DNA to 1000 parts fuel (1:1000).
1ml treats 1 litre of fuel. Use continually for best results.

Packaging

500ml, 1L, 5L
and 200L Drums.
